

The value of certification for the installation of **SPRAY POLYURETHANE FOAM**

SPFA

The Spray Polyurethane Foam Alliance's (SPFA) Professional Certification Program (PCP) Benefits

HOMEOWNERS

Helps consumers identify spray foam contractors who employ professionals who completed the Professional Certification Program and demonstrated their knowledge of rigorous installation and safety standards.

SPRAY FOAM INSTALLERS

Enables individuals who completed the Professional Certification Program to demonstrate **knowledge, skills and professional accomplishment.**

ARCHITECTS & BUILDERS

Instills confidence in architects, builders and their clients that the installer or company completed the Professional Certification Program showing a **commitment to safety, quality and professionalism.**

Two Commitments to Safety and Professionalism

The SPFA PCP's multi-level certification is a rigorous and extensive program for professionals who install spray polyurethane foam (SPF) insulation and roofing. It is the only SPF industry certification program developed, designed and operated in compliance with internationally recognized ISO-17024 standard. **Some of the requirements are that candidates must:**

-  pass the Professional Certification Program exams related to the levels of certification being pursued. Master installers must also pass a Field Examination.
-  document spraying experience for Installer/Master Installer and project management experience for the Project Manager.
-  maintain certified status annually and recertify every seven years. CEUs required for recertification.

SPF Contractor Companies can also become PCP Accredited by meeting all designated requirements. In addition to demonstrating that a company is operating in compliance with local requirements, **SPFA PCP Accredited Companies must:**

-  have all Field Personnel complete a chemical health and safety course provided online by the ACC Center for the Polyurethanes Industry (CPI).
-  document company experience on SPF projects and submit their safety and training program for review
-  have an employee with an OSHA 30 hour card from a construction course and meet the personnel requirements for the number of SPFA PCP Certified Individuals.

Further details and requirements are available at www.sprayfoam.org/certification

Spray Foam
Coalition

The Spray Foam Coalition, part of the American Chemistry Council's Center for the Polyurethanes Industry, supports the SPFA's voluntary certification program that expands industry's efforts to create the highest standards of quality and safety. Voluntary certification questions? Visit www.sprayfoam.org, call 1-866-222-5000 or email admin@spfapcp.org. To learn about SPF's benefits, visit www.whysprayfoam.org.
